What is claimed is:

- A double-sided pressure-sensitive adhesive sheet 1. to be used in sticking and fixing a touch panel to a display surface of a display device, one surface of the double-sided pressure-sensitive adhesive sheet being stuck substantially entirely on the touch panel, and the other surface being stuck substantially entirely on the display surface of the display device, wherein the double-sided pressure-sensitive adhesive sheet has at least pressure-sensitive adhesive layers but does not have a substrate, is constructed such that it is repeatedly peelable against at least one surface of the touch panel and the display surface of the display device, and has optical isotropy.
- 2. The double-sided pressure-sensitive adhesive sheet according to claim 1, which has from two to five pressure-sensitive adhesive layers.
- 3. The double-sided pressure-sensitive adhesive sheet according to claim 1, wherein the pressure-sensitive adhesive layers at least in the both outer sides are formed of an acrylic pressure-sensitive adhesive.
- 4. The double-sided pressure-sensitive adhesive sheet according to claim 1, wherein at least one pressure-sensitive adhesive layer of the pressure-sensitive adhesive layers in the both outer sides has a 180°-peeling adhesive strength (to a glass plate or a triacetyl cellulose film at

a peeling rate of 300 mm/min at 23°C) of not more than 5.0 N/20 mm.

- 5. The double-sided pressure-sensitive adhesive sheet according to claim 1, which is used for fixing a display device to a touch panel in the inner touch panel system.
- 6. A touch panel-provided display device, wherein a display device and a touch panel are fixed to each other via the double-sided pressure-sensitive adhesive sheet according to any one of claims 1 to 5.
